

Helensburgh Golf Club Swing Studio Introduces

Flightscope X2 is the next generation 3D club and ball tracking radar. Interfacing with a customer is now easier than ever, contributing to a whole new club fitting and teaching experience. The X2, the World's most accurate and portable launch monitor.

Change your game!

Instruction with Flightscope

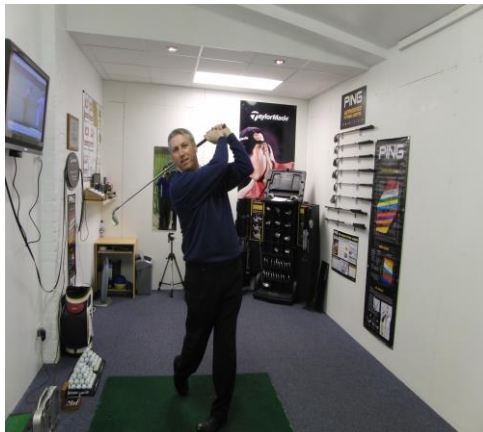

The Flightscope X2 accurately measures the true 3-dimensional trajectory of the ball flight along with ball speed, carry, spin, launch angle, club speed and club path. Along with the coaching advice you will be given during your lesson, Flightscope technology will act as an invaluable tool to allow our professionals to analyse every element of your game.

Don't leave anything to chance. Flightscope X2 lets you actually SEE your improvement with real time data! It's an experience not to be missed!

Custom Fitting with Flightscope

The Flightscope X2 is the newest fitting tool on the market and is a Doppler radar system which tracks the flight of the golf ball, your clubhead speed, distance, spin rates, flight time, flight height and ball speed. The data gathered in each session is used to give the individual the best equipment to suit the way they hit the ball.

We do not just use the numbers given by the machine, we will take into consideration all aspects of the customer involved and combine expertise with technology.

FlightScope Table
Name: Gregory Havret

Shot	Distance Yards		Club	Ball	Smash	Spin		Ball Angles (°)		Height	Time	Classification
